IN THE SPECIFICATION

Page 3, between lines 5 and 6, insert new paragraph:

In the following Summary, the meaning of acronyms is a follows: CFR - confirmation of facsimile receipt; DCN - discontinue communication notification; DCS - digital communication signal; EOF - end-of-file; EOP - end of procedure; MCF - message confirmation function; NSF - non-standard function; NSS - non-standard function setting; and TCF - training check function.

Paragraph starting at page 24, line 11:

Step S17: The gateway device on the receiver side 221, since it has already returned the CFR signal back to the gateway device on the sender side 211 without waiting for the receipt of the CFR signal from the facsimile device 121 at the Step S10, starts receiving picture data sent from the facsimile device on the ~~receiver~~ sender side 111 at the Step S13. Because of this, the gateway device on the receiver side 221, even if it receives the CFR signal from the facsimile device on the receiver side 121, does not return it back to the gateway device on the sender side 211.

Page 12, between lines 23 and 25, insert new paragraph:

In the following Description, the meaning of acronyms is a follows: CFR - confirmation of facsimile receipt; DCN - discontinue communication notification; DCS - digital communication signal; EOF - end-of-file; EOP - end of procedure; MCF - message confirmation function; NSF - non-standard function; NSS - non-standard function setting; and TCF - training check function.
